Abstract

Education is basic condition for making a difference in life. Only when one know why and how it is possible to act in order to live better. In case of environmental education it is not just humans that should benefit from received knowledge. Our role brings responsibility to take a care of all life support system on Earth, and that includes nature with every living creature. People can choose to do any job, but we are all generally responsible for actions of human kind. This is why we all need to learn the role that each of us have in everyday life and how can we best contribute preservation of environment with all its components. Selfishly it sounds but only by saving other life forms it is possible for humans to last on Earth.

Keywords: environment, environmental education, sustainable development education, group target principle, esde strategy;
