Abstract

The investigation focused on the impact on the environment caused by a dairy farm which supplies SC CAMYLACT LTD Panaci with raw materials, a milk processing unit whose impact on the environment was analyzed. The material balance for the activity on the farm was resized and, thanks to this, the synthetic indicators of the impact on the environment, such as the specific influents of materials and specific effluents could be calculated.

Keywords: dairy farm, effluent, environmental impact, material balance, specific influent
